#### **DETAILED ACTION**

### Continued Examination Under 37 CFR 1.114

- 1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on July 13, 2005 has been entered.
- 2. Claims 2-5 and 12 are pending.

Applicant canceled claims 6, 10 and 11.

New Claim 12 was added. New claim 12, containing the subject matter of previous claim 6, meets the enablement requirements under 35 USC 112, 1st paragraph.

3. The objection to claims 3 and 5 are withdrawn in light of the amendment to claim

3.

# Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 1752

5. Claim 12 is rejected under 35 U.S.C. 102(b) as being anticipated by Barzynski et al. (US 4,555,471).

Page 3

The image recording materials of Barzynski et al. meet the present a. limitations for the photosensitive resin printing plate material. Specifically, base, reliefforming layer (RL), intermediate layer (I) and mask-forming layer (ML) (see abstract: column 7, lines 40-65) meet the present limitations for the support, photosensitive resin layer, transfer-preventing layer and photocoloring layer respectively. Suitable materials for the relief-forming layer include polymeric binders such as polyvinyl alcohol and its derivatives and polyvinyl acetates, ethylenically unsaturated, photopolymerizable compounds and photoinitiators (column 6, line 24 - column 7, line 40). The intermediate layer has a thickness from 5 to 135 µm (.005 to 0.135 mm) (column 7, lines 64-65). Suitable resins for the intermediate layer include polyethylene (column 7, lines 41-53) which meets the present limitations for the hydrophobic resin. The maskforming layer contains thermochromic system which when irradiated with an IR laser having a wavelength greater than 1.00 µm (1000 nm) undergoes an irreversible change in its absorption spectrum in the range from 300 to 420 nm. It can be such that before being irradiated with the IR laser, it has a low optical density with the optical density increasing as a result of irradiation or the reverse can be true (column 2, line 48 column 4, line 5). The development is described in the Examples 2-4 and in column 8, lines 48-52.

Application/Control Number: 09/890,926 Page 4

Art Unit: 1752

### Response to Arguments

6. Applicant's arguments filed July 13, 2005 have been fully considered but they are not persuasive.

a. With respect to new claim 12 which contains the subject matter of previous claim 6, Applicant argued Barzynski fails to disclose the claimed subject matter, specifically (1) the substance transfer-preventing layer is a hydrophobic resin or UVcurable resin when the photosensitive resin layer contains a water soluble resin and (2) the substance transfer-preventing layer is a water-soluble resin or UV-curable resin when the photosensitive resin layer is a hydrophobic resin. The Examiner disagrees. As pointed out in the rejection under 35 USC 102(b), the intermediate layer meets the present limitations for the transfer-preventing layer and the relief-forming layer meets the present limitations for the photosensitive resin layer. Suitable polymers for the intermediate layer include polyethylene, a hydrophobic resin (column 7, lines 41-53) and suitable polymers for the relief-forming layer include water-soluble polyvinyl alcohol and its derivatives (column 6, line 24 – column 7, line 40). Clearly, the intermediate and relief-forming layers of Barzynski satisfy the first condition (1) of claim 12. The Examiner's position is supported by Applicant specification at page 17, 1st paragraph.

## Allowable Subject Matter

- 7. Claims 2-5 are allowed.
- 8. The following is a statement of reasons for the indication of allowable subject matter:

Art Unit: 1752

a. Claims 2 and 4 were previously allowed.

b. Claim 3 is allowed in light of the present amendment. Claim 5 is

dependent on claim 3.

Conclusion

9. Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Barbara L. Gilliam whose telephone number is 571-272-

1330. The examiner can normally be reached on Monday through Thursday, 8:00 AM -

5:30 PM.

a. If attempts to reach the examiner by telephone are unsuccessful, the

examiner's supervisor, Cynthia H. Kelly can be reached on 571-272-1526. The fax phone

number for the organization where this application or proceeding is assigned is 571-273-

8300.

b. Information regarding the status of an application may be obtained from

the Patent Application Information Retrieval (PAIR) system. Status information for

published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR only.

For more information about the PAIR system, see http://pair-direct.uspto.gov. Should

you have questions on access to the Private PAIR system, contact the Electronic

Business Center (EBC) at 866-217-9197 (toll-free).
